

### Step 1: Create a Git Repository

Open GitHub and log in.

Click on New Repository.

Name the repository is "42\_Manisha"

Select Public or Private, Here I select Public.

Check "Add a README file".

Click on Create repository.

### Step 2: Clone the Repository

Open Git Bash or Terminal.

Navigate to the desired directory where you want to clone the repository.

Run the following command:

```
git clone https://github.com/Man27sha/42_Manisha.git
```

Navigate into the repository:

```
cd 42_Manisha
```

### Step 3: Create Folders

Create two folders named Assignment\_1:

```
mkdir Assignment_1
```

Verify the folders are created:

```
ls
```

### Step 4: Add and Commit Changes

Add the new folders to the Git staging area:

```
git add Assignment_1
```

Commit the changes:

```
git commit -m "Added Assignment_1 folders"
```

### Step 5: Push Changes to GitHub

Push the changes to the remote repository:

```
git init
```

```
git branch -M main
```

```
git add .
```

```
git commit -m "commit-1"
```

```
git status
```

```
git push
```

### Step 6: Create a Word File with Documentation

Open Microsoft Word or Google Docs.

Document each step with screenshots (optional).  
Save the file as Git\_Assignment\_Documentation.docx.
